

Superior Smart Meter Solutions

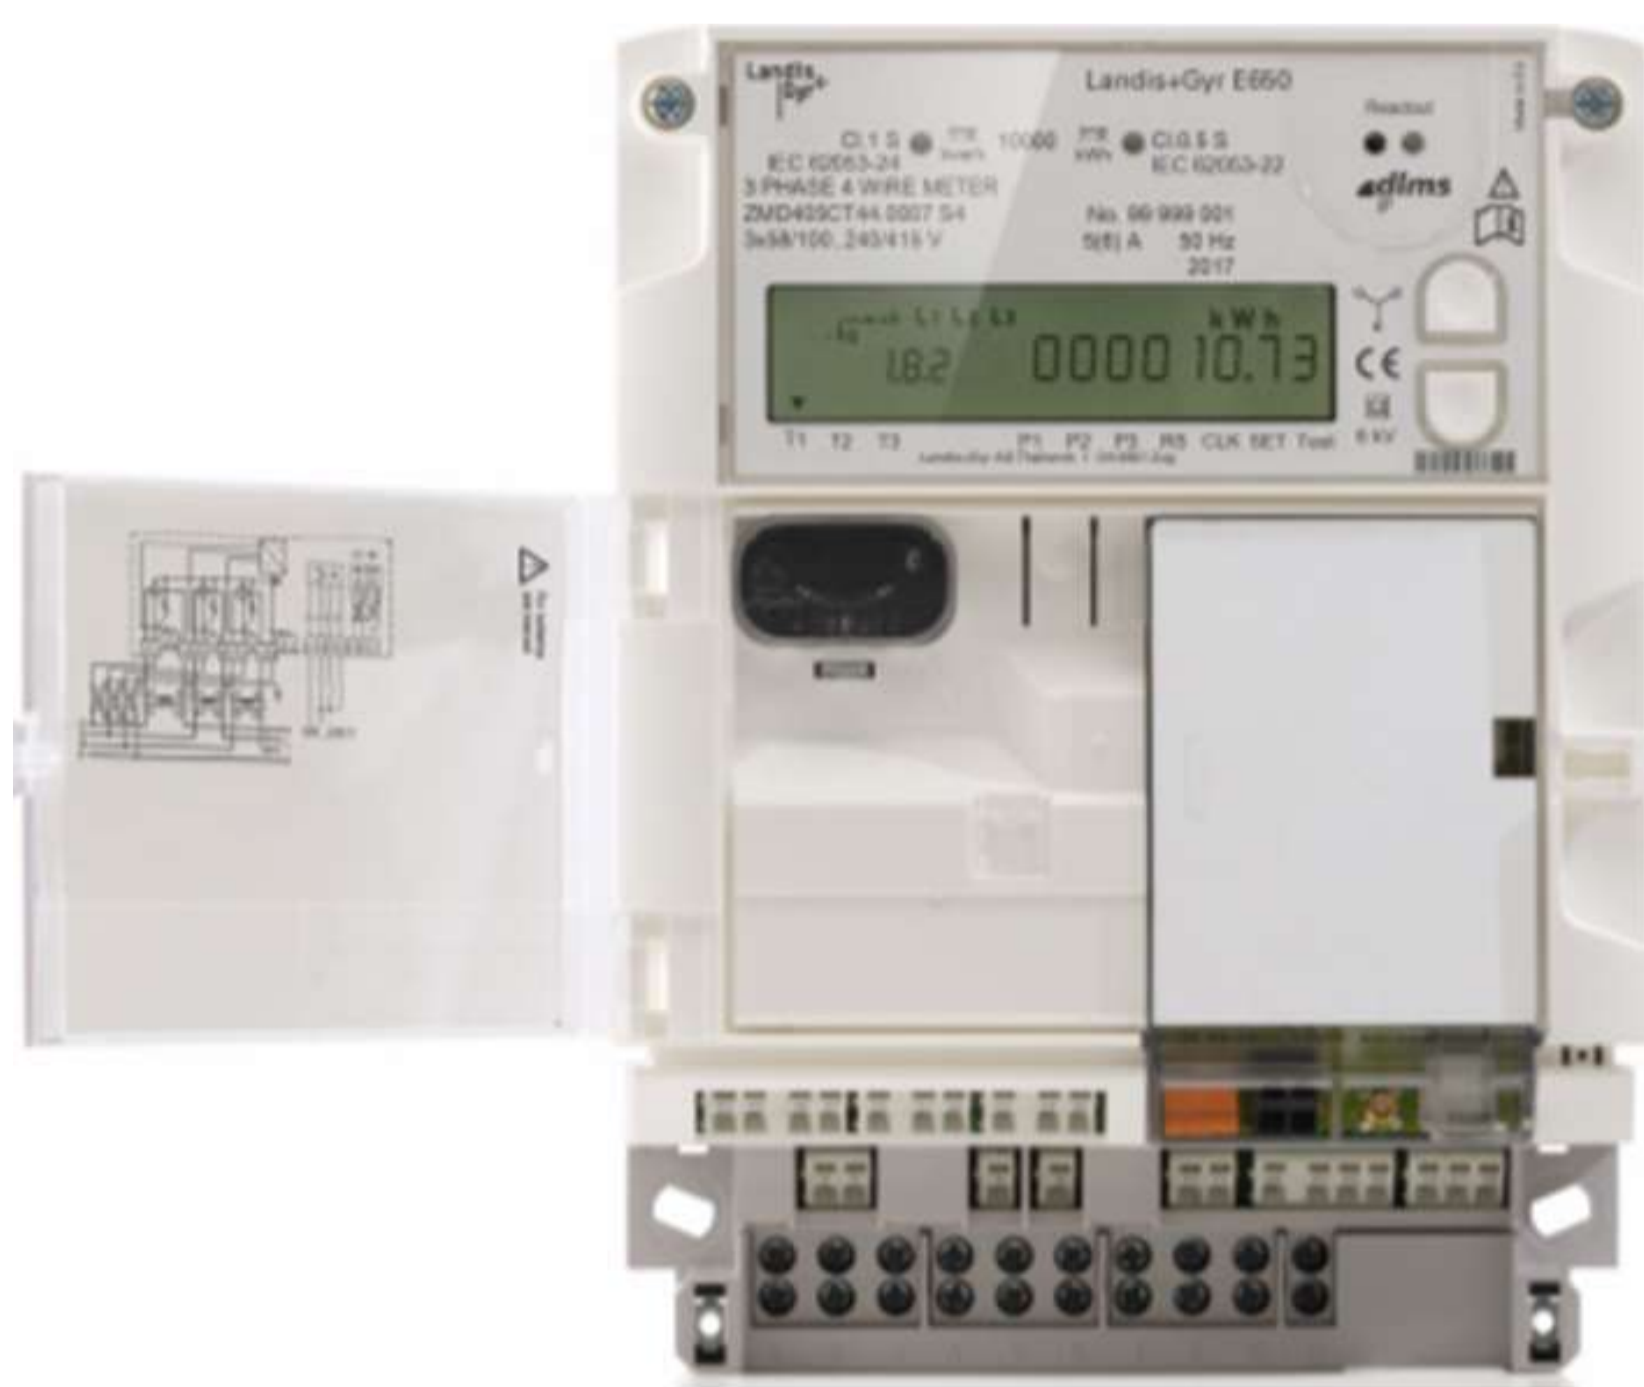

Manage Energy Better

In today's world, one of the major challenges faced by energy providers is future-proofing the smart grid technology efficiently. Thanks to the new Landis+Gyr fourth series advanced industrial meter, it is now possible to aptly manage energy. This best-in class energy meter is utilized to reduce the demand for peak electricity and permit end-users to smoothly track power consumption and decrease it accordingly.

"Over 2 million metering devices installed in 80 countries around the world."

Electricity Meter Landis+Gyr E650

The changing market landscaping demands open solutions. That is why you need a safe metering investment for the future that is also environmentally friendly. The E650 meter family offers you maximum flexibility through unique communication modularity, high interoperability and a comprehensive functionality set.

The new release 3 phase meter is known to be the most effective and efficient. With more than 30 different communication options available this meter achieves maximum performance in all industrial and commercial application areas. It comes with a large LCD display, optical button for display of different voltage, current, current, power and frequency being measured, 24 energy registers and also includes 2 software tools:

MAP120 - Mainly used for setting parameters given by the customer.

MAP110 - Helps in installation support, communication settings, generate data reports, etc.
